The sequence contained an oligo-dT track that was present in the
oligonucleotide that was used to prime the synthesis of first
strand CDNA and therefore this may represent a bonafide poly A
tail. The sequence tag present in the cDNA between the NotI site
and the oligo-dT track served to verify it as a clone from the
normalized cartilage library cDNA Library Preparation: M.B. Soares
Lab Clone distribution: clones will be available through Research
Genetics (www.resgen.com)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /note-Porgan: Femur and Tibla; Vector: pT773D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI; UI-R-DY1 is a normalized cDNA library containing the following tissue(s): Rat Cartilage from Femur and Tibla. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The sequence tag for this library is CTAATGGACG. The Rat Cartilage tissue was provided by Dr Jeff Stevens at the TAG_LIB-UI-R-DYI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TAG_TISSUE-cartilage

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    mRNA sequence.
                                                                                                                                                                                                                                                     /incte=-Norgan: Stomach; Vector: pTZ18RP1; Site_1: EcoRI; Site_2: NotI; The poly (A)+ RNA was decapped with tabacco acid pyrophosphatase (TAP) and ligated with DNA-RNA linker including EcoRI site by treatment of T4 RNA ligase. The first strand cDNA was synthesized from oligo dT-selected mRNA by priming with dT-tailed vector. The dT-tailed vector was adjusted to have about 60nt. The cDNA vector was circularized with E. coli DNA ligase after digestion of EcoRI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli ToplOf' by electroporation method. After analyzing and sequencing about 2,000 - 3,000 colonies in original cDNA library, the abundant cDNAs were selected and amplified by PCR reaction using vector region primer including T7 promotor as 5' primer and N(dT)14 as 3' primer. The PCR products were used as template for synthesis of biotinylated single stranded cDNAs prepared from original liberary and incubated with avidin-gel. After removing DNA-RNA hybrids by centrifue, the
                                                                                                                                                                subtracted cDNA libraries were constructed by transformation of the remaining DNA into competent cells coll ToploF, with electroporation method."

The first strand cDNA was synthesized from oligo dT-selected westor was adjusted to have about 60nt. The cDNA vector was circularized with E. coli DNA ligase after digestion of EcoRI which site is also included in vector. An RNA strand converted to a DNA strand by Okayama-Berg method. The obtained cDNA vectors were used for transformation of competent cells E. coli Top10F' by electroporation method. After analyzing and sequencing about 2,000 - 3,000 colonies in original cDNA library the abundant cDNAs were selected and amplified by PCR reaction using vector region primer including T7 promotor as 5' primer and NdT)14 as 3' primer. The PCR products were used as template for transcription reaction. The synthesized RNA by in vitro hybridized with antisense single stranded cDNAs prepared after removing DNA-RNA hybrids by centrifuge, the subtracted cDNA libraries were constructed by transformation of the remaining DNA into competent cells E. coli Top10F' with electroporation method."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /cell_line="SNU-484"

Sequence 3, Application US/09163285
Patent No. 6204013
GENERAL INFORMATION: APPLICANT: Khodadoust, Mehran
APPLICANT: Khodadoust, Mehran
TITLE OF INVENTION: NOVEL MSP-5 PROTEIN AND NUCLEIC ACID MOLECULES
TITLE OF INVENTION: AND USES THEREOF
NUMBER OF SEQUENCES: 4
CORRESPONDENCE ADDRESS: ADDRESS: LAHIVE & COCKFIELD, LLP
STREET: 28 State Street
CITY: Boston
STATE: Massachusetts
COUNTRY: USA
ZIP: 02109
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC Compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOTYWARE: PATENTIN BATA:
APPLICATION NUMBER: US/09/163,285
FILING DATE:
CLASSIFICATION NUMBER: US/09/163,285
FILING DATE: June 24, 1998
ATTORNEY/AGENT INFORMATION:
NAME: Mandragouras, ANY E.
REGISTRATION NUMBER: 36,207
REFERENCE/DOCKET NUMBER: MNI-049
TELLECOMMUNICATION INFORMATION:
TELEPHONE: (617)742-4214
INFORMATION FOR SEQ ID NO: 3:
